

## Aluminum Molding

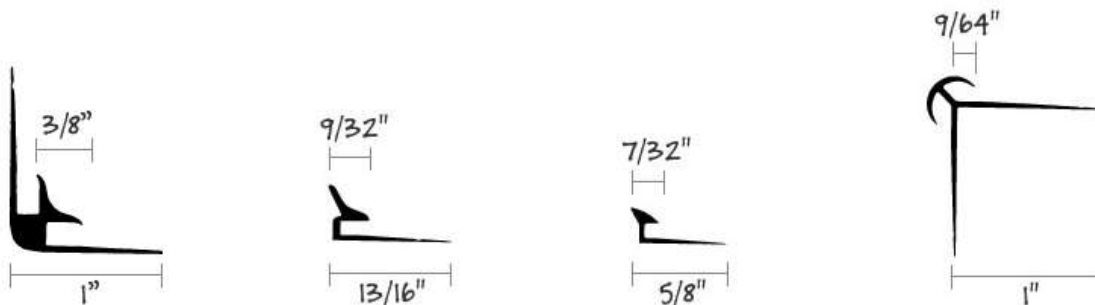

### Welcome to the Largest Stock of Decorative Aluminum Extrusions in the U.S.A.

Hoskin & Muir has been in business since 1946 as a distributor of all sorts of decorative aluminum extrusions and structural profiles. We've now made our decorative aluminum trim available online. So whether you're looking for aluminum angles, bars, flats, mirror mouldings, or decorative trim for your 50's diner, we likely have what you're looking for.

In 1946 Ed Hoskin hauled a trailer load of decorative aluminum (counter edging, Formica caps, mirror and carpet molding, etc.) purchased from the William L. Bonnell company in Youngstown, Ohio, to San Francisco, California. He struggled along wholesaling the trim for a couple of years, advertised for a financial partner, and one day, Dennis Muir showed up on his doorstep. They formed a partnership and in 1948, Hoskin & Muir was born. For the next several years Ed worked inside answering the phones and packing and invoicing the orders and Mr. Muir hit the road drumming up business. By the way, Dennis Muir was probably the most unforgettable character I've ever known.

### Corner Mouldings

Decorative and structural aluminum corner mouldings for many thicknesses of panels, including formica, frp (fiberglass reinforced plastic), Marlite/wallboard, 3/16" and 1/4" glass, and 1/2" panels and more.

## Face And Inset Nosings

Decorative aluminum face nosings in a variety of widths and styles. Also below are grooved face nosings (for that 50's look) and no-drip bar nosing.

## Floor Covering Mouldings

Decorative and structural aluminum edging and caps for carpet, linoleum, stairnosings, thresholds and more.

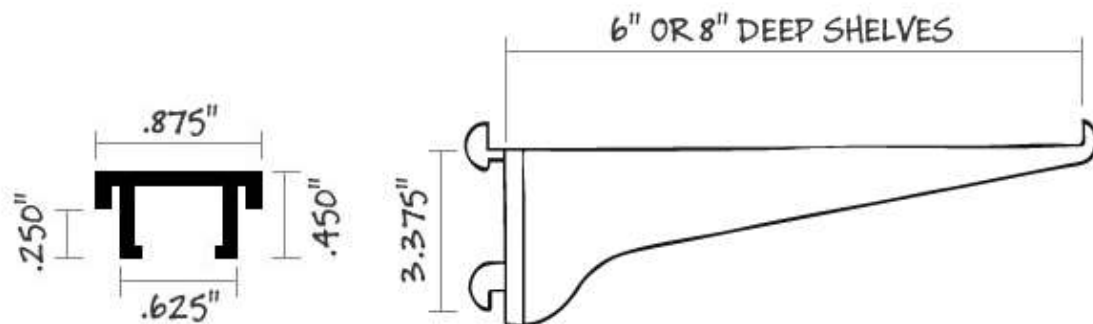

## Mirror Mouldings

We are pleased to stock the widest variety of mirror mouldings in the industry. The finishes are an exact match or complementary to our shower enclosure offerings at Cardinal Shower Enclosures.

Many of the items below are designed to be used in pairs. For example, typically when hanging a mirror, you might use A718 at the top and A717 at the bottom. You slide the mirror up into the deep channel then lower it into the shallow channel.

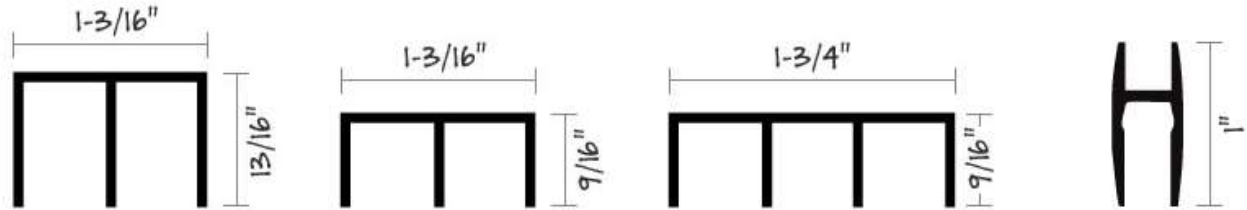

## Shelf Standards And Brackets

These shelf standards are designed to work with a mirror or glass backing and are at home in casinos and bars. The shelf brackets are designed to hold 6" or 8" deep material.

## Showcase Door / Sliding Door Assemblies

We are pleased to offer several selections of showcase headers and track assemblies. You can purchase items individually or kits for widths from 3' to 8' long.

## 50's Style Mouldings

We stock a wide variety of mouldings that are used in a nationwide 50's style diners, keeping that clean retro look.

In addition to the finishes listed below, these aluminum showcase mouldings are available in our full range of powder coat colors.

## Finishes and Colors

Due to variations in display screens the colors displayed may not exactly match the actual finishes. This is especially true for Chrome. It's like asking what color a mirror is. Generally it's whatever is reflected in the mirror. But that can be a good thing.

In January of 1995 I moved to Louisville and together with Doc (James Dachenhaus in Livermore), built storage racks bought and installed fabrication equipment, and loaded in inventory. Business in Louisville took off quickly thanks to many people, but especially Curtis Young, the best inside sales guy I've ever known and Wes DeSoto, who ran the shop. We bought Arizona Shower Door out of the partnership in 1996 and started adding distribution facilities: Cerritos and Texas in 1999, Hawaii in 2003, and Boston and Sparks in 2004. In 2007 we added a glass fabrication and tempering facility, a powder-coat line, and a kiln for making cast glass.

Now, Hoskin & Muir has the largest stock of decorative aluminum extrusions in the country. With a wide range of finishes, we've got what you need. Last fall we built a powder-coat line in our Louisville office to provide custom powder-coating to our customers.
