Anti-Slip Floor Solutions

Slip and Fall Prevention

Complete Slippery Floor Solutions from the Anti-Slip Floor Experts

We supply anti-slip floor and anti-slip bath treatment services, adhesive anti-slip/non-skid tapes, glow in the dark safety tapes, do-it-yourself clear abrasive anti-slip floor and bath coatings, colored anti-slip floor paint, and slip resistance (coefficient of friction) testing services (both in the lab and in the field) that help prevent slips and falls.

As the leading slip resistance testing experts in the Americas, we also keep you up-to-date on the latest slip resistance test standards, can sell you your own slip resistance test instrument, and offer expert witness services and accident investigations. We offer the best solutions available to make any floor much safer when dry and/or wet.

Safety Direct America is a subsidiary of Sotter Engineering Corporation, which was founded in 1987 and incorporated in 1991.

We supply anti-slip/non-skid floor-care products and applications; instruments; and consulting and expert witness services that use technology to improve safety, health and the environment.

Sotter Engineering Corporation is Licensed by the State of California Board for Professional Engineers and Land Surveyors. We have been testing flooring slip resistance for more than fifteen years. We are also certified by the City of Los Angeles for testing floor slip resistance. Los Angeles is one of the few government agencies in the USA that certifies labs for floor slip testing.

In the past, Sotter Engineering has tested flooring and often found that it was slippery when wet. The only option for the property owner was to optimize maintenance, conduct surveillance, give warnings, and implement various precautions to try to prevent the floor from being wet or otherwise lubricated. This did not solve the underlying problem: the floor was still slippery when wet. Some hard flooring can be acid-etched, but this permanently damages the surface, makes it difficult to clean, adversely affects its appearance, and is only a temporary fix.

Safety Direct America now has the capability to apply an anti-slip treatment, sell YOU the treatment for application by your crew, or sells you anti-slip coatings to fix any hard or

resilient floor to make it slip-resistant dry or wet. We can apply this coating to your bathtubs as well, or sell the product to you for self-application.

With every reliable and trustworthy non-skid floor solution available through our online store, we truly are the Anti-Slip Floor Superstore!

We are the leading experts in floor slip resistance testing in the Americas. We run COF or slip resistance tests using the British pendulum, BOT-3000E, and the Tortus tribometers to test the coefficient of friction of your flooring either at your location or in our certified lab.

We carry anti-slip tape for every situation, as well as glow in the dark egress tapes. Our non-skid tapes are the best available, and we have abrasive grit tape in standard, coarse and extra-coarse, as well as non-abrasive anti-slip tapes for barefoot areas like bathtubs, showers and kitchens.

We carry do-it-yourself paint-on abrasive anti-slip floor coatings that you can apply to almost any surface to create a safe floor, bath, pool deck, garage or shower. All our abrasive anti-slip floor coatings are tested for slip resistance and very simple to paint on to the surface to make it non-skid for years to come.

Non-Slip 21 is our anti-slip floor and anti-slip bath treatment service for use in commercial, institutional, and industrial properties. It's the only anti-slip floor treatment endorsed by Ceramic Tile Institute of America and it has a track record of passing quarterly floor slip resistance tests for five years and more.

We carry an environmentally friendly, colored anti-slip floor paint and sealer that you can apply to almost any surface to create a safer environment with a long-lasting, durable color. Our non-slip paint is recommended for pool decks, warehouses, stadiums, residential garage floors, locker rooms, etc.

We are discount sellers of slip resistance test instruments. We sell the BOT-3000E, British pendulum, Tortus and SlipAlert slip resistance test instruments (tribometers). We also have a calibration lab here in the USA for the pendulum slip tester.

Our anti-slip floor treatment services, DIY abrasive non-skid floor coatings, anti-slip grip tapes, and non-abrasive anti-slip floor treatments can give coefficient of friction levels that are much safer in wet and dry conditions. We blow away our competition by offering reliable slip resistance testing with our anti-slip floor solutions. Interested in anti-slip floor fixes, standards, tests, and the latest issues? Check out our anti-slip floor blog. This video explains the basics of floor slip resistance.

Safety Grip Abrasive Anti-Slip Tape

Do-It-Yourself Paint-On Abrasive Anti-Slip Floor Coatings

We offer Do-It-Yourself (DIY) anti-slip paint-on abrasive floor coatings (each with their own benefits):

- SolidStepCote, (below) a “green”, water-based clear anti-slip floor coating that’s as effective as STOP it!, available in many bottle sizes, dries ready for walking quickly, and comes ready to apply without having to mix components
- FlexDuraCote, (click here) a colored, water-based anti-slip floor paint and sealer that is durable and tough, specifically designed to provide a colorized, anti-slip floor surface for pool decks, walkways, sports arenas, patios and garages

Self-Adhesive Abrasive Anti-Slip Tapes

Easy to apply anti-slip tape with a peel-off adhesive backing. Built to last for any indoor/outdoor use. You’ll find our shipping rates on tapes and paint-on do-it-yourself clear abrasive anti-slip floor coatings ridiculously simple and cheap. Orders over \$120 ship FREE!! Express shipping available – call for a quote. We also carry non-abrasive anti-slip grip tapes for tubs, showers, and kitchens.
