

Yellow Rack

In-Trailer Load Bar & Strap Storage Product

Yellow Rack:

THE solution to the problem of storage for freight protection equipment, an effective tool that not only keeps load bars and straps out of the way of freight handling operations, but also keeps this costly equipment INSIDE the trailer, so you can be sure your tools don't end up lost on the loading dock!

FEATURES

- **Yellow Rack** is made of exclusive rubberized nylon polymer for outstanding strength and flexibility. Not a plastic!
- Portable: clips in like a strap or load bar—no tool installation!
- Low-profile design keeps load bars compact and upright against the inside trailer wall
- Self-adjusts to fit all horizontal e-track and 24-to-center vertical slots—every time!
- Simple design makes loading and unloading a snap, and load bars are always at the ready
- Engineered to insure that bars don't fall out during transit
- Rounded edges will not catch on clothing or freight
- Allows for padlocking of bars in the Rack, or Rack can be locked to wall
- Bright yellow color for safety

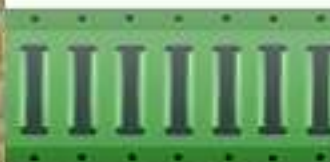

ADVANTAGES

- Reduces space required for storing load bars: 6 bars on the floor use a minimum of 16 sq. ft. **Yellow Rack** reduces that to 1 sq. ft!
- Provides in-trailer storage to prevent loss and/or damage
- Offers an easy method for keeping inventory and for implementing accountability procedures
- Increases use of load bars, critical for compliance with DOT regulations
- Pays for itself the first time out!
- Same cost as one load bar, but saves you six!
- Rubberized nylon polymer allows **Yellow Rack** to take the shock if load bars stored in it are hit by freight
- Drivers and dock workers love using **Yellow Rack**!
